University of Essex

ESSEX BUSINESS SCHOOL

Essex Business School

Strategy, Operations, & Entrepreneurship Group

Module Code	BE277
Module Title	Business Analytics for Managers and Entrepreneurs
Assessment Type	Individual Report
Academic Year	2026, Spring Term
Submission Deadline	Refer to FASER

Assessment (Individual Report)

Question (100 Marks, 2000 Words)

You have been presented with the **Zomato[1] restaurants** dataset. The dataset is uploaded on Moodle for reference ***(zomato.csv)***. There is also a country code to name mapping provided in ***Country-Code.xls***. For this coursework, consider yourself as an analyst keen to deep dive and apply your analytical skills to develop greater insights from the data to support decision-making in the restaurant and food delivery industry. Please create a report that helps Zomato executives develop meaningful insights from the data.

You may use any set of methodologies you prefer. Please note that your choices need to be justified, and all details about your work and relevant findings must be explained in the report.
At least two types of analytics are required. Below are some suggestions:

1. Descriptive analytics. For example, you can use the methods introduced in this module to describe your dataset, plots, graphs, descriptive metrics, and correlational analysis.
2. Predictive analytics. Build predictive/machine learning models as appropriate to generate insights from the data set, develop hypotheses and validate them using predictive analytics techniques.

Below are some guidelines on the analysis you can perform with the data:

Descriptive Analytics -

- Location and Geography
- Cuisine and Menu Insights
- Pricing and Value
- Ratings and Engagement
- Online Delivery and Services

- Which factors (price, cuisine, delivery, location) are most associated with high ratings?
- Does online delivery impact popularity differently across cities?

Predictive Analytics-

- Rating and Popularity Prediction
- Restaurant's Performance Prediction
- Location and Cuisine Prediction

- Can restaurants be clustered based on price, cuisine, and ratings?

[1] Zomato is an Indian online food ordering and delivery service. Created in 2008 by Deepinder Goyal and Pankaj Chaddah, it began as a restaurant aggregator, providing menu information, user reviews, and recommendations, and expanding to more than 20 countries.

Task Specific Guidance

Please note that:

- You must submit a 2000-word (excluding Figures, Tables and the Appendix) individual report in electronic format (preferably in PDF format) via FASER.
- This assessment represents 100% of the overall module mark. Please do NOT exceed the word limit.
- Carefully read and answer all questions by detailing all the required aspects.
- All numerical and graphical analysis should be included in this document (Individual Report). Please include high resolution and clear graphs, figures, and charts. Make sure all graphs, charts, tables, and figures have legends and captions and are properly referred to in the main body of your report.
- This individual report must be well-referenced using Harvard referencing style where necessary. Please carefully read the Academic Office and Citation guideline provided under General Guideline in this document.

Assessment (Individual Report) Structure Guidelines

Your individual report should be organised as follows:

- **Title Page** must be included. This page should outline i) the type of report submitted, ii) module name/number, iii) the name of the module leader, iv) student registration number, and v) the date of submission.
- **Executive summary** is not required.
- **Abstract** is not required.
- **Table of Content** is required. All sections headings and subheadings with corresponding pages must be included.
- **List of figures** is not required.
- **List of tables** is not required.
- **Main body of the individual report:**
  - Please clearly mention the task/question number/name, include your answer and all relevant figures/graphs/charts/functions required.
  - You should include your main points, arguments, and any diagrams, graphs, tables, etc. here.
  - Bear in mind your report must be well referenced. Please carefully read the Referencing and Academic Offence Guidelines provided in this document and ensure all the instructions are followed.

- You can use relevant and reliable sources (books, articles, reliable online sources, company, or government reports/documents, etc.). You can also use the lecture notes and reference them like any other secondary resource.
- You can use subheadings if you wish.

- Conclusions – is needed. Summarise the main points of your analysis under this heading.
- Appendices – If necessary, secondary information table or summary of spreadsheet models and the model results can be presented as appendix.

Referencing and Academic Offence Guidance

- Cite all information used in your individual report which is clearly from a source. Try to ensure that all sources in your reference list are seen as citations in your work, and all names cited in the work appear in your reference list.
- Reference and cite your work in accordance with the Harvard system, the Essex Business School's (EBS) chosen referencing style. For specific advice, you can talk to Southend Campus Librarian at studyskills@online.essex.ac.uk or go to the library help desk, or you can access library guidance here.
- The University has regulations relating to **Academic Offence**, including **plagiarism.** Detailed information are available on University's website about Academic Offence and How to Avoid Academic Offence. If you need further help, you can find more help here.
- **Artificial intelligence and Exams/Coursework:**

  'The University's position on AI- *Generative AI technology will certainly be something that you encounter in your personal and professional lives long after you have graduated. At Essex, we want you to explore generative AI tools responsibly. But when you use these tools, remember to think about things like keeping your data safe, respecting copyrights, and being honest in your academic work. We hope that by the time you graduate, you will have developed the knowledge and skills to be able to use AI effectively and ethically to support your learning and help you succeed in the future.*

  AI can't be used to write assessments- *Writing your own assignments is the only way in which you will develop the skill of communicating effectively in written form. It is also a key pathway for developing your skills more broadly, including the key abilities of developing, formulating, expressing, and testing your own ideas. You will be cheating yourself if you don't use your time at university to develop those skills by writing your own assignments – whether with or without assistance from digital tools including AI.'*

  For further information, please read **Artificial Intelligence Guideline** provided by University of Essex here.

Late Submission

Please note that late submissions beyond the exact submission deadline date and time will **NOT** be accepted unless full details of satisfactory extenuating circumstances are provided.

For details of extenuating circumstances please see the undergraduate student handbook. If you have any query about extenuation, please contact EBS Southend Student Enquiries Team (ebshelp-sou@essex.ac.uk).

Marking Scheme

The EBS Making Scheme can be found on Moodle under BE277>Assessment. These criteria will be used to mark your work and will be used to support the electronic feedback you receive on your marked assignment. Before submission, check that you have tried to meet the requirements of the higher-grade bands to the best of your ability. Please note that the marking process involves academic judgement and interpretation within the marking criteria.

Appendix- Assessment criteria

These criteria are intended to help you understand how your work will be assessed. They describe different levels of performance of a given criteria. Criteria are not weighted equally, and the marking process involves academic judgement and interpretation within the marking criteria.

The grades between Pass and Very Good should be considered as different levels of performance within the normal bounds of the module. The Exceptional and Outstanding categories allow for students who, in addition to fulfilling the Excellent requirements, perform at a superior level beyond the normal boundaries of the module and demonstrate intellectual creativity, originality and innovation.

The tailored Assessment Criteria for this module can be found on Moodle under BE277>Assessment.
